English Version — Versão em Português

Professional Summary

Fullstack developer with a strong backend focus, experienced in building REST APIs, authentication and real-time systems.
Strong knowledge of data structures and algorithms, with hands-on experience using Databases, Docker, Linux, and CI/CD pipelines.
Developed academic and personal projects applying software engineering best practices with strong academic performance.

Key Technologies: TypeScript, Java, Go, PostgreSQL, React, NestJS, Docker, Git

Skills

Programming: TypeScript, Java, Go

Frameworks: React, NextJS, NestJS, Express, Fastify, Spring Boot

Databases: PostgreSQL, MySQL, MongoDB, Sqlite

Tools: Git, Github, Docker, Jenkins, Linux

Cloud: Vercel, Railway

English: Intermediary (B1)

Soft Skills: Teamwork, Communication, Problem Solving

Experience

Instituto Federal do Rio Grande do Sul – Campus Osório — **Rio grande do Sul, Brazil**
Scholarship Student, Fullstack Developer — *May 2025 – Dec 2025*

- Developed fullstack features for an e-commerce platform as a scholarship software developer.
- Designed and implemented a RESTful API using Fastify and Prisma, including server-side authentication and authorization.
- Built a modern responsive frontend using React, NextJS, Tailwind CSS, shadcn/ui, and Next-Themes.
- Collaborated in an agile Kanban environment, participating in sprint planning and code reviews.

Projects

Backend – Stock API — **Live** | **Github**
TypeScript, NestJS, MongoDB, Docker, Jenkins

- Developed a REST API for inventory management using NestJS and MongoDB.
- Implemented server-side authentication and authorization with JWT, refresh tokens, and role-based access control.
- Created CRUD operations with pagination, sorting, and filtering for scalable and efficient queries.
- Applied data validation, error handling, unit tests, and API documentation with Swagger.
- Configured a CI/CD pipeline with Jenkins to automate testing, build, and deployment processes.
- Containerized the application using Docker to ensure consistency across development, testing, and production environments.

Fullstack – Real-time Web Chat — **Github**
Typescript, React, Postgres, ws

- Fullstack web application built with React and Vite with real-time communication via WebSocket.
- Client–server message exchange with dynamic UI updates.
- Authentication using JWT.
- Data persistence using PostgreSQL with Sequelize.

Fullstack – Card Game Deck Builder — **Github**
Typescript, React, Next.js, Drizzle, Postgres

- Fullstack web application for building and managing card game decks
- Authentication implemented with NextAuth
- User and deck persistence using Drizzle ORM and PostgreSQL, with external card API integration
- Integration and consumption of external API for dynamic card data retrieval

Alchemy – Educational Game for Data Structures **Live** | **Github**

C#, Unity, Data Structure

- Academic thesis written in LaTeX and awarded the highest grade
- Educational game teaching stacks, queues, linked lists, and sorting algorithms through gameplay mechanics
- Emphasis on fun and engaging game design to enhance learning motivation

Education

Instituto Federal do Rio Grande do Sul – Campus Osório **Rio Grande do Sul, Brazil**

Technologist in Analysis and Systems Development *2023 – 2025*

- Focused on software development, data structures, and systems design.
- Strong foundation in core concepts and a wide range of technologies.
- Graduated with a GPA of 9.3 and a final thesis graded 10.

Instituto Federal do Rio Grande do Sul – Campus Osório **Rio Grande do Sul, Brazil**

Technician in Informatics *2018 – 2021*

- Practical foundation in programming and software logic.
- Knowledge of computer systems and basic architecture.
- Experience with IT support and technical maintenance.
- Preparation for advanced studies in software development.
